

# Hall Creek Habitat Restoration Project

*A Better Creek for Fish, Wildlife, Water, and People* July 2021 - Update

The Tualatin Soil and Water Conservation District helps residents of Washington County use sustainable, productive, and innovative ways to care for our land, water, and community.

Hall Creek is an urban waterway that starts its journey near Canyon Road in Beaverton. This 3-mile creek flows through neighborhoods between Raleigh Park and Kennedy Park before emptying into Beaverton Creek.

Hall Creek is an important resource for fish, wildlife and humans, but has become degraded over time as invasive plants have displaced native vegetation.

## Restoring Hall Creek

Over the next several years the Tualatin SWCD will be working to restore Hall Creek. The goals of this project are to:

- Enhance wildlife habitat by removing invasive plants and replanting native trees, shrubs and other wildlife friendly plants
- Filter rainwater runoff before it reaches the creek
- Create shade to keep water cool, helping improve water quality

CONSERVATION DISTRICT

Conservation is for everyone.

## What happens during a habitat restoration project?

A phased restoration plan is created to ensure project success. Licensed restoration professionals:

- Remove invasive plants to prepare the site for new plantings
- Plant native trees and shrubs
- Monitor and maintain new plants during the first three to five years of the project

## What is the project timeline?

Restoration projects occur over approximately five years. After the initial project establishment, periodic maintenance will be required. Initially, the restoration site may appear bleak, but it will soon green up with new growth and diversity as native plants create quality habitat for wildlife.

## Want to get involved?

Tualatin SWCD will be hosting several open houses and other events over the next several years. We welcome your ideas and invite you to get involved in the transformation of your local natural area.
